

DN Cards — Command Reference

What is DN Cards?

DN Cards is a Discord collectible card game bot. Server members catch cards from random spawns, build collections, trade with each other, burn duplicates for DN Shards, open packs, equip cosmetic frames, battle AI or other players, and compete on leaderboards. Admins manage card rosters, sets, rarity tuning, events, packs, and the web dashboard through slash commands. The bot stores per-guild collection progress, so every server has its own card economy and rankings.

Live Commands (86 registered)

User Commands

Command	Description
<code>/accept</code>	(User) Accept a pending trade offer
<code>/achievements</code>	(User) View unlocked achievements
<code>/adminsecret</code>	(User) Post an encrypted staff message only auth

<code>/sethub</code>	(Admin) Clickable set manager — create sets, add cards
<code>/setup</code>	one click (Admin) Interactive server setup wizard — channel, name, etc
<code>/takeback</code>	(Admin) Remove a card from a member's collection
<code>/takeshards</code>	(Admin) Deduct DN Shards from a member
<code>/welcomeadmin</code>	(Admin) Post the admin onboarding guide — setup, etc

Removed & Restored Commands

Currently removed

- /menu — A component-driven hub that opened the same features now available as direct slash commands (/collection, /pack, /burn, /trade, /sets, /achievements). It was removed to reduce command clutter and because the standalone commands are faster to use.

Temporarily removed during the merge, then restored

- /giveall, /editpack, /calc, /valuehelp, /valuelist, /info_mttv, /postcalculator, /dnvaluesearch, /dnvaluelist, /dnvalueinfo, /dnvaluecalc, /dnhelp. These were live add-ons. They were accidentally dropped when the command set was flattened, and have been re-registered and wired back into the dispatcher.

Why this happened

The merge brought in a large remote refactor (Bob NPC, giveaways, unified /help hub, and flat command names). The old dispatch sets were replaced with new hub sets, and several registered commands were left without a route. A startup coverage guard has now been added so any registered command without a handler will fail loudly at boot instead of silently timing out.
